## Summary

Experienced front-end developer with a passion for building innovative solutions that solve complex problems, Proficient in JavaScript, Node Js, and [HTML , CSS] Also using React as the main framework, have Extensive experience in developing Web applications for the tech industries, A highly skilled and motivated software developer.

## Work Experience

### OPTIMIZA Digital inc.

Kitchener, Canada (Remote)

FRONT-END DEVELOPER

Jun. 2021 - May. 2023

- Built a dashboard to be used as a CMS for other projects and controlled data using [UML.js: SSR framework] I was controlling that data while there were 13k users on the database.
- Used Bitbucket pipeline [CI/CD] and setup Firebase server to deploy the project from Bitbucket to Firebase server.
- Raised company income by building 12 different landing pages for a big event in a short time .
- Boosted dashboard performance by 30 percent by including [DVA.js : state management library] to control data in the project and make less API calls.
- Saved time for the other employees by building a feature that can export any table inside the project to an Excel sheet file with a controller that can filter by table filters automatically.
- Made a components folder using [React] and included this folder in multiple projects to help the team not repeat the code over and over again.

### Freelance

Remote

FRONT-END DEVELOPER

Jan. 2019 - Jun. 2021

- Built 4 landing page templates so I can customize them according to client needs .
- Programmed a tool the clients can customize their website by using JavaScript web components and CSS variables with auto deployer on Netlify to display the website live.
- Made a system make the client can edit the page content by his own and change the [URLs] and images by using [/admin] as a CMS for the page by including a simple form for the content.

## Projects

### React Dashboard

FRONT-END DEVELOPER

- Source Code : <https://github.com/mohammedsinan/Sulation-For-Redux-Complexity-/tree/polished>
- Technologies that were used in this project [ React, Less, Redux, ANTD, Charts, React-router, Axios, and more]
- Built a very smart system on top of the project that can import routes, inject reducers to Redux store, create a menu item in the project menu, implement a Breadcrumb system in the pages inside the project, and more, and all this is possible through define one object .
- Built a dispatch system inside Redux that can dispatch reducers and API calls with just one line of code without defining an action also it can be creating a Redux slice in one single line of code.
- A scalable dashboard can be used as a dashboard or another type of application because it has a system of layouts it can be changed the layout depends on the page needed.
- Used Less variables in the project so it can be changed the theme in a single line of code [Primary color, Font family, Border radius, and more], and set up a babel-loader to make javascript support all the browsers.
- Setup Webpack and [ less, Sass, CSS, and Javascript ] loaders and capable to defined an Alias also can build the project in one Javascript file and one HTML file .

### Landing Page

FRONT-END DEVELOPER

- Simple and high-performance landing page using static HTML, JavaScript, and Sass colorful and dynamic website .
- Responsive page can fit any type of screen horizontally or vertically and any screen size with a navigation bar turn into a hamburger menu on a mobile screen.
- Smooth and high-quality animation and dynamic website using CSS variables also using web components .

## Education

### University of Tikrit(Business administration management bachelor)

Iraq, saladin

Mar. 2022 - Aug. 2026

- Improved the university's website and boosted its performance by 50 percent by Rebuilding it using Astro.
